PROFESSIONAL SUMMARY

AI/ML engineer in training with hands-on experience building and evaluating deep learning models for medical imaging and computer vision, plus applied exposure to cloud infrastructure (AWS), Python automation, and DevOps/CI-CD from two enterprise training programs (Cognizant, Accenture). Skilled in TensorFlow, PyTorch, and scikit-learn, with a track record of translating research papers and datasets into working, measurable models. Seeking an entry-level Machine Learning / Data Science role where I can apply model development, data pipeline, and cloud deployment skills to production systems.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript, SQL

ML/DL Frameworks: TensorFlow, PyTorch, scikit-learn, OpenCV

Data Science: NumPy, Pandas, Matplotlib, Feature Engineering, Model Evaluation (AUC/ROC)

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC), Windows Server, Active Directory, DNS/DHCP, Linux Administration, Virtualization

DevOps & Tools: Git, CI/CD, Docker, REST APIs, Generative AI & Prompt Engineering

Methodologies: Agile, DevSecOps

EXPERIENCE

Programmer Analyst Trainee

Feb – Jul 2026

Cognizant

- Completed intensive Cloud Infrastructure Services (CIS) training covering Windows Server, Active Directory, Linux, computer networks, virtualization, AWS, Python, Generative AI, and DevOps.
- Administered Windows Server, Active Directory, and DNS/DHCP environments and provisioned/managed AWS resources (EC2, S3, IAM, VPC) through hands-on labs.
- Built Python automation scripts for infrastructure tasks and practiced Git-based version control and CI/CD workflows.
- Strengthened infrastructure troubleshooting and analytical skills through enterprise-focused technical training and practical labs.

Packaged App Development Associate

Jun – Oct 2025

Accenture

- Completed structured training in software fundamentals, web technologies, and Python programming, gaining hands-on experience in problem-solving and application development.
- Applied Agile, DevOps, and DevSecOps methodologies with a focus on CI/CD, automation, and secure software delivery.
- Studied Generative AI and prompt engineering and its role in the Application/Infrastructure Management Services (AMS/IMS) lifecycle.

PROJECTS

Brain Tumor Classification Using Radiomics & Radiogenomics

Nov 2024 – Jan 2025

Guide: Mr. Tathagata Chatterjee, Assistant Professor, CSE (AI/ML), NIT

- Built a VGG16-based deep learning model to detect glioblastoma from MRI scans, fusing medical imaging features (radiomics) with genetic data (radiogenomics) to improve diagnostic accuracy.
- Trained and validated the model on 8,000 MRI scans from the BRaTS 2021 dataset, predicting MGMT methylation status and achieving an AUC of 0.737.
- Handled data preprocessing, class-imbalance mitigation, and feature fusion across imaging and genomic modalities.

Human Movement Tracking System

Aug – Sep 2024

- Developed a real-time computer vision application to track and analyze human body movement in video using MediaPipe.
- Implemented landmark detection across body parts to reconstruct full-body pose with low latency.

EDUCATION

Narula Institute of Technology, Kolkata, WB

2021 – 2025

Bachelor of Technology, Computer Science — Artificial Intelligence and Machine Learning

St. Thomas Church School, Howrah, WB

2009 – 2021

ICSE (Class X) & ISC (Class XII)

CERTIFICATIONS

- Supervised Machine Learning: Regression and Classification — Coursera (Stanford University)
